KROY: A User Manual

Welcome to kroy! Unfortunately, Aliens seem to have invaded york - which is inconvenient, as it is where quite a few people live. Luckily, you appear to be a very competent alien invasion preventer/fire engine driver - and it's your job to save the city!

1.) Starting the game:

To load Kroy, select the executable file "Kroy.exe" from your saved location and choose open: this should bring you to a start screen with various options.

Start: Takes you straight into a new game of kroy, get ready!
New game: Resets the current kroy file so you can start afresh
Quit: Exit the game

2.) Aim of the game

Being aliens, they appear to be deathly afraid of water - which is where you and your trusty fire engine come in. Navigate the fire engine through the map and destroy the alien towers via a nice cold shower. Be careful though - your fire engine can only hold so much water and take so much damage, make sure to restock your water tanks at the fire station at the start of the map. Make sure to avoid damage by dodging their projectiles!

3.) Controls:

Kroy has a relatively simple control system
(Windows/Mac):

↑ (UP arrow)	Move the fire engine up
↓	Move the fire engine down
← (Left Arrow)	Move the fire engine left
→	Move the fire engine right
Mouse cursor	Aim water
Mouse-1 Click	Fire water
